

Small Scale Abattoirs

Fact Sheet – February 2025

The development and construction of a small scale on-farm abattoir requires adherence to a range of regulations and standards from Local, State and in some cases Federal Government agencies.

The operation of an abattoir can pose a risk to both the environment and amenity if not properly designed, managed and located. Consequently, consultation with regulatory agencies and compliance with legislative requirements is important in this process.

The key agencies include:

State Government - PrimeSafe

PrimeSafe is Victoria's independent food safety regulator and is the key regulatory agency for small scale abattoirs. They are a State Government body and are responsible for licencing of all meat processing facilities. All abattoirs regardless of scale require a licence from PrimeSafe.

State Government - Agriculture Victoria

Although abattoir operators do not require licensing or permissions from Agriculture Victoria, they must ensure that animal welfare codes and regulations regarding livestock management and welfare, and the National Livestock Identification System (NLIS) are adhered to. The Agriculture Victoria [online E-guide](#) is an excellent source of information and a great place for interested developers to start (link also listed under Where to get Advice).

Local Government – Statutory Planning Departments

Statutory Planning departments regulate land use and development through the planning approvals process. Abattoirs are a defined land use within the Macedon Ranges Planning Scheme. Fixed abattoirs (i.e. not mobile) require a planning permit for land use and development.

Local Government - Environmental Health Departments

Environmental Health departments regulate waste-water treatment systems and other environmental health related matters. If there is no existing access to a reticulated sewerage system, a permit may be required for an on-site waste-water management system to manage liquid wastes.

Building Permits - Local Government Building Departments & Private Building Surveyors

Construction works (new building work and alterations to existing buildings), a change of building use and structures of a temporary nature require a building permit to be obtained from a suitably qualified and experienced building surveyor registered in Victoria.

State Government - Environment Protection Authority (EPA) Victoria

The EPA manages regulatory responsibilities for prescribed permissions activities (including abattoirs), organic waste processing, waste-water management and waste management.

Federal Government - Department of Agriculture, Fisheries and Forestry (DAFF)

DAFF are responsible for supervision of livestock processing in export abattoirs and issuing of meat export licences where applicable.
